Automatic Bar Controls Inc.

Technical Service Bulletin

Date: 8/28/2020

Product: All M4 Series Barguns

Subject: Guideline for setting fluid pressure into Barguns

When adjusting or validating the fluid pressure into the Wunderbar M4 Series Bargun, it is recommended that you ensure water pressure DOES NOT exceed 110 PSI and syrup pressure does not exceed 90 PSI, with all dispenser valves closed. If this level is exceeded, then damage to the system can be incurred and leaks in the tubing and/or Bargun may propagate.

Additional Information: If you need further details, then please contact Wunderbar service at 1-866-986-3372 or Service@wunderbar.com.
